Subject AQS Software Upgrade Tomorrow Morning (Friday 5/11/07)

AQS User,

This email is to inform you that a software upgrade will be installed in the AQS production environment tomorrow morning (5/11/07) between 7:30 - 8:00 am EST.

This upgrade will replace the Maintain Monitor form that has been updated in the following ways:

- 1) The form now allows Collection Frequency Code 7 (every 12th day) to be used for PM2.5 parameters.
- 2) Previously the form would display (jump to) the Monitor Collocation tab whenever a record was updated or whenever an error occurred, even if the error did not involve collocation. This has been fixed.
- 3) Previously, entering both the Close Date on the Monitor Basic tab and end dates on other tabs, such as the Sample Periods tab, would produce an error. This has been corrected. (Please note that the purpose of the Close Date field is to put end dates on all open date ranges specified on the other tabs. Putting end dates on the other tabs is not necessary when using the Close Date field to close a monitor.)

Please note: AQS will be operational tomorrow morning (even during the install). Our recommendation is that users not use the Maintain Monitor form until after 8 am EST.

We appreciate your support and apologize for any inconvenience this may cause.

Best regards,
Chuck
